

WORLD WAR BOT

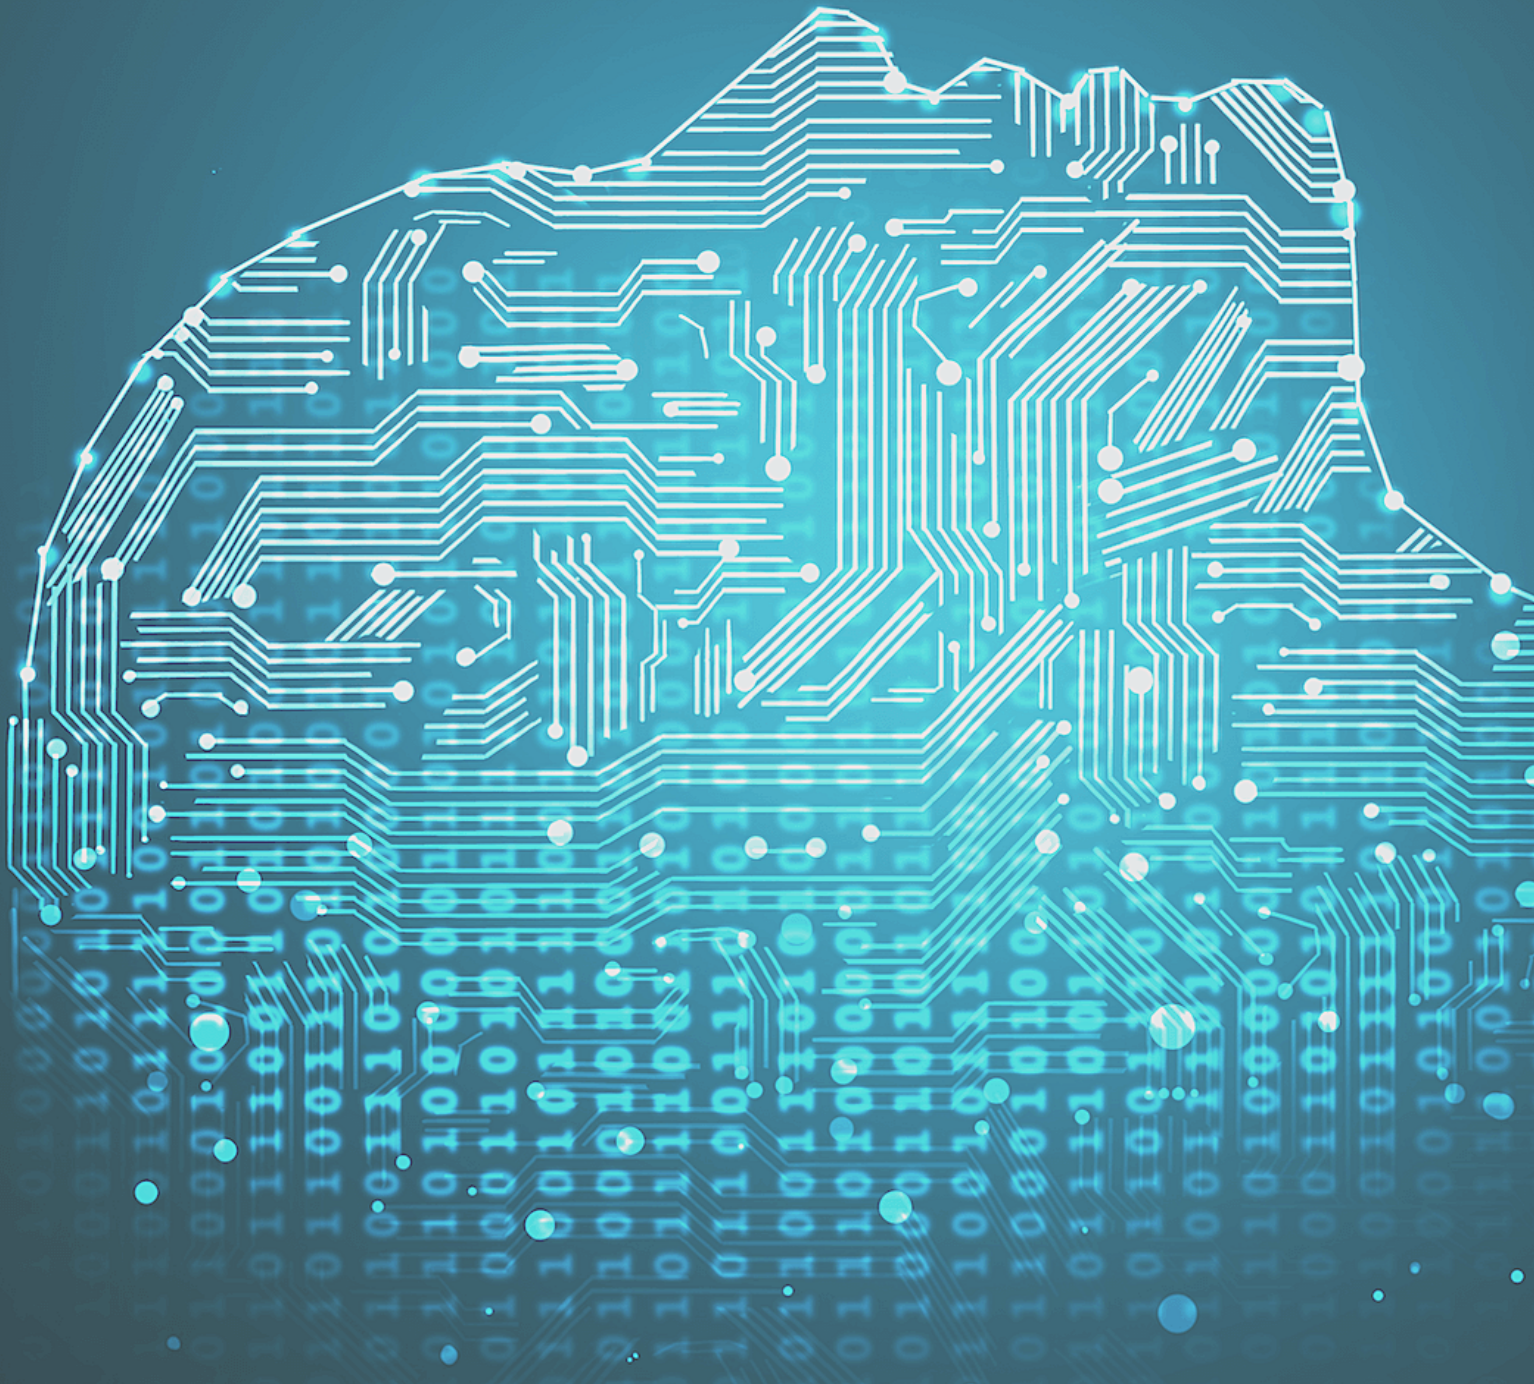

WHITE PAPER V1.0

1.INTRODUCTION

TronWarBot is a decentralized DApp platform. It is based on the development of TRON's main net.

The 3 pillars are Transparency, Fairness, and CDD (Community Driven Development)

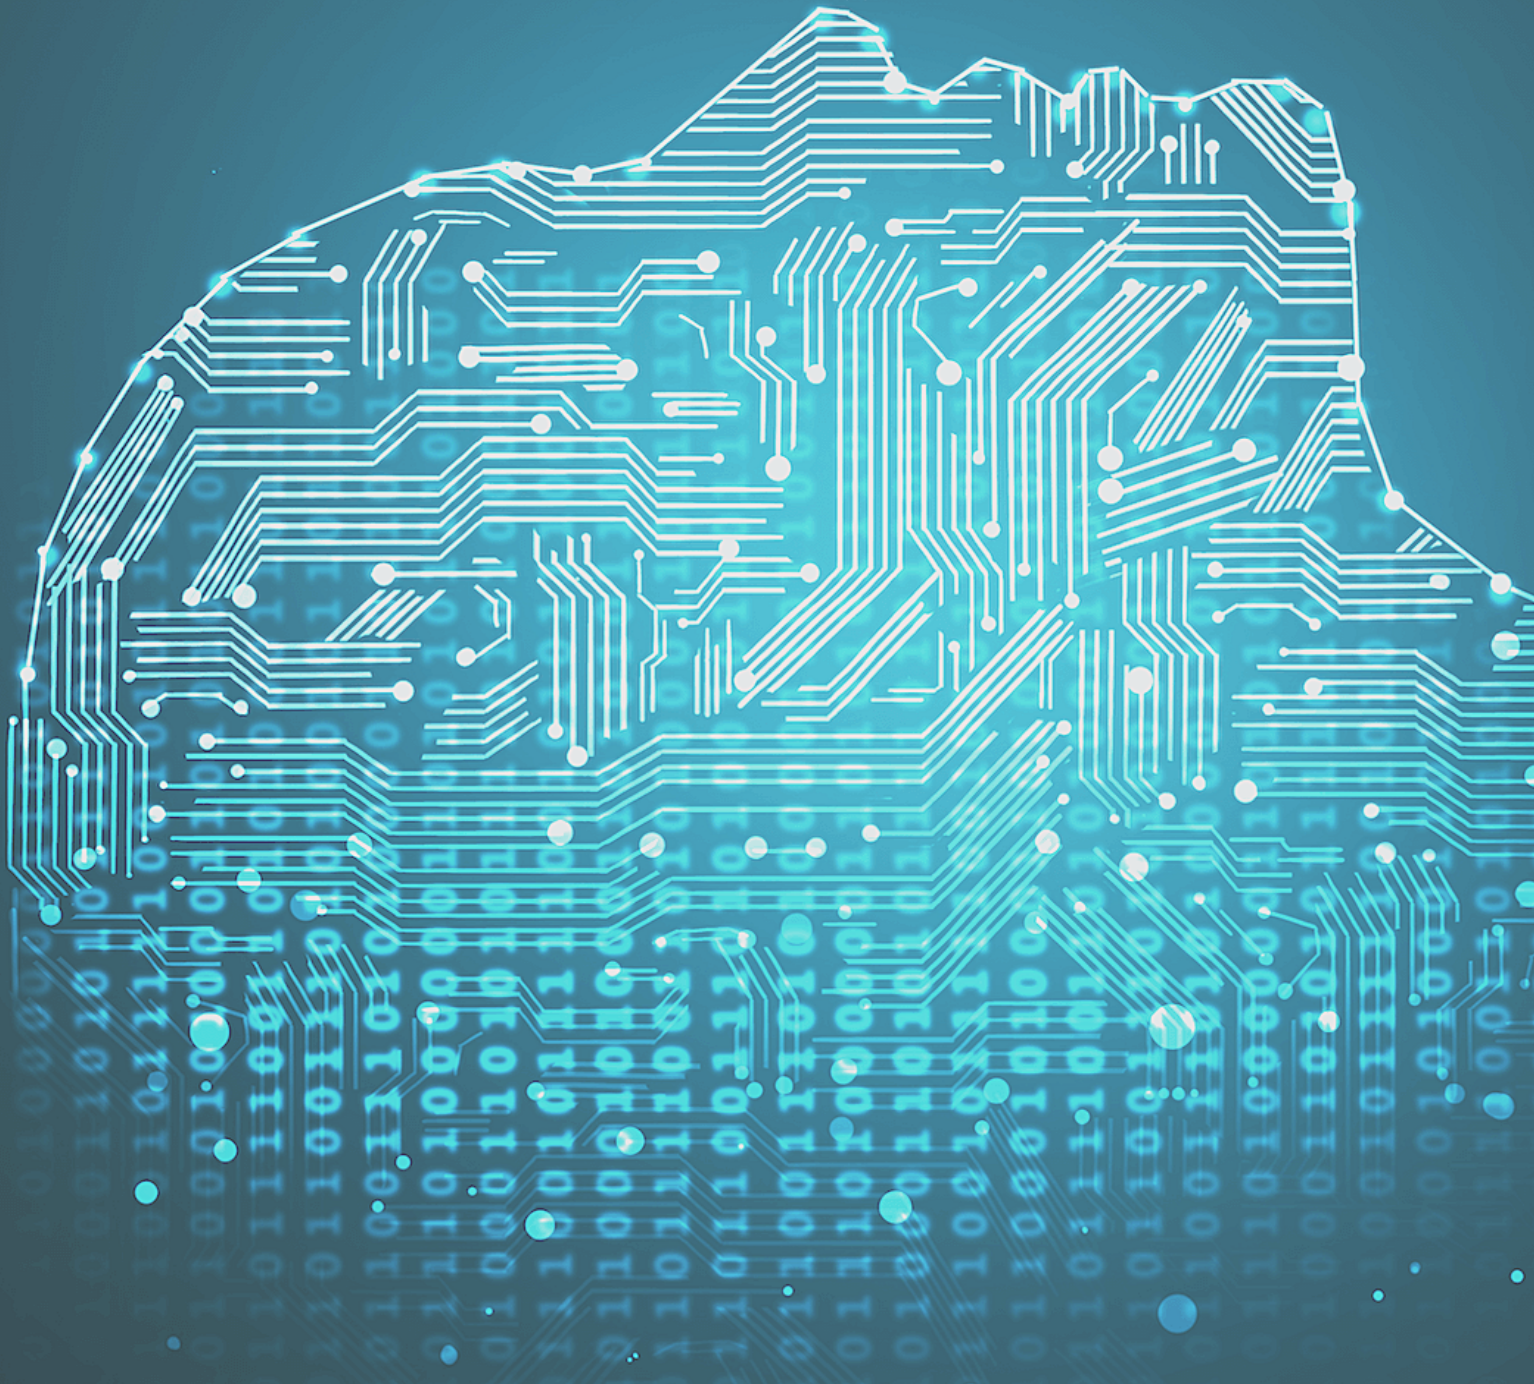

2. TRON BLOCKCHAIN

TRON ensures scalability, since it is capable of handling almost 2000 TPS, and free daily bandwidth to conduct transactions.

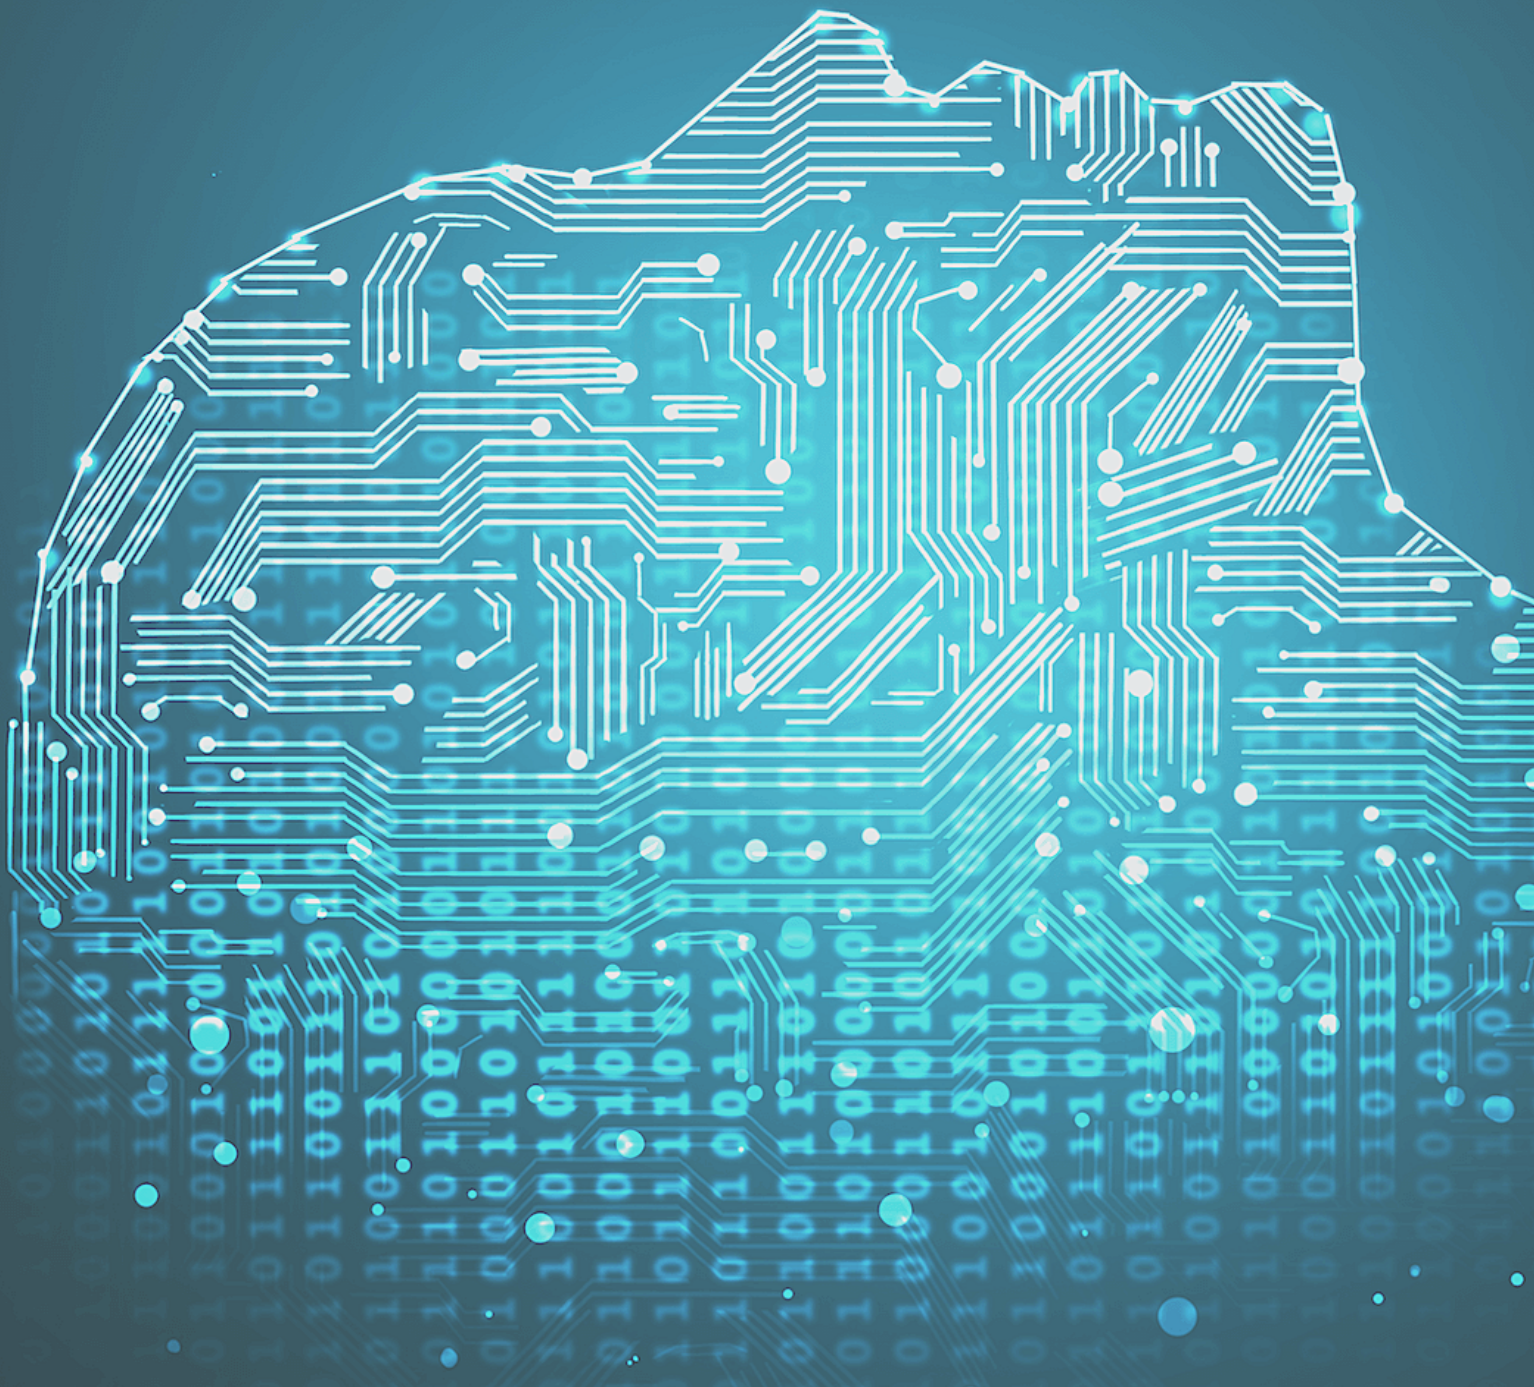

3. THE GAME

The game leans on the FB page WorldWarBot 2020 where every hour one nation conquers another one. On www.tronwarbot.com bets are allowed to forecast the conqueror state of next turn.

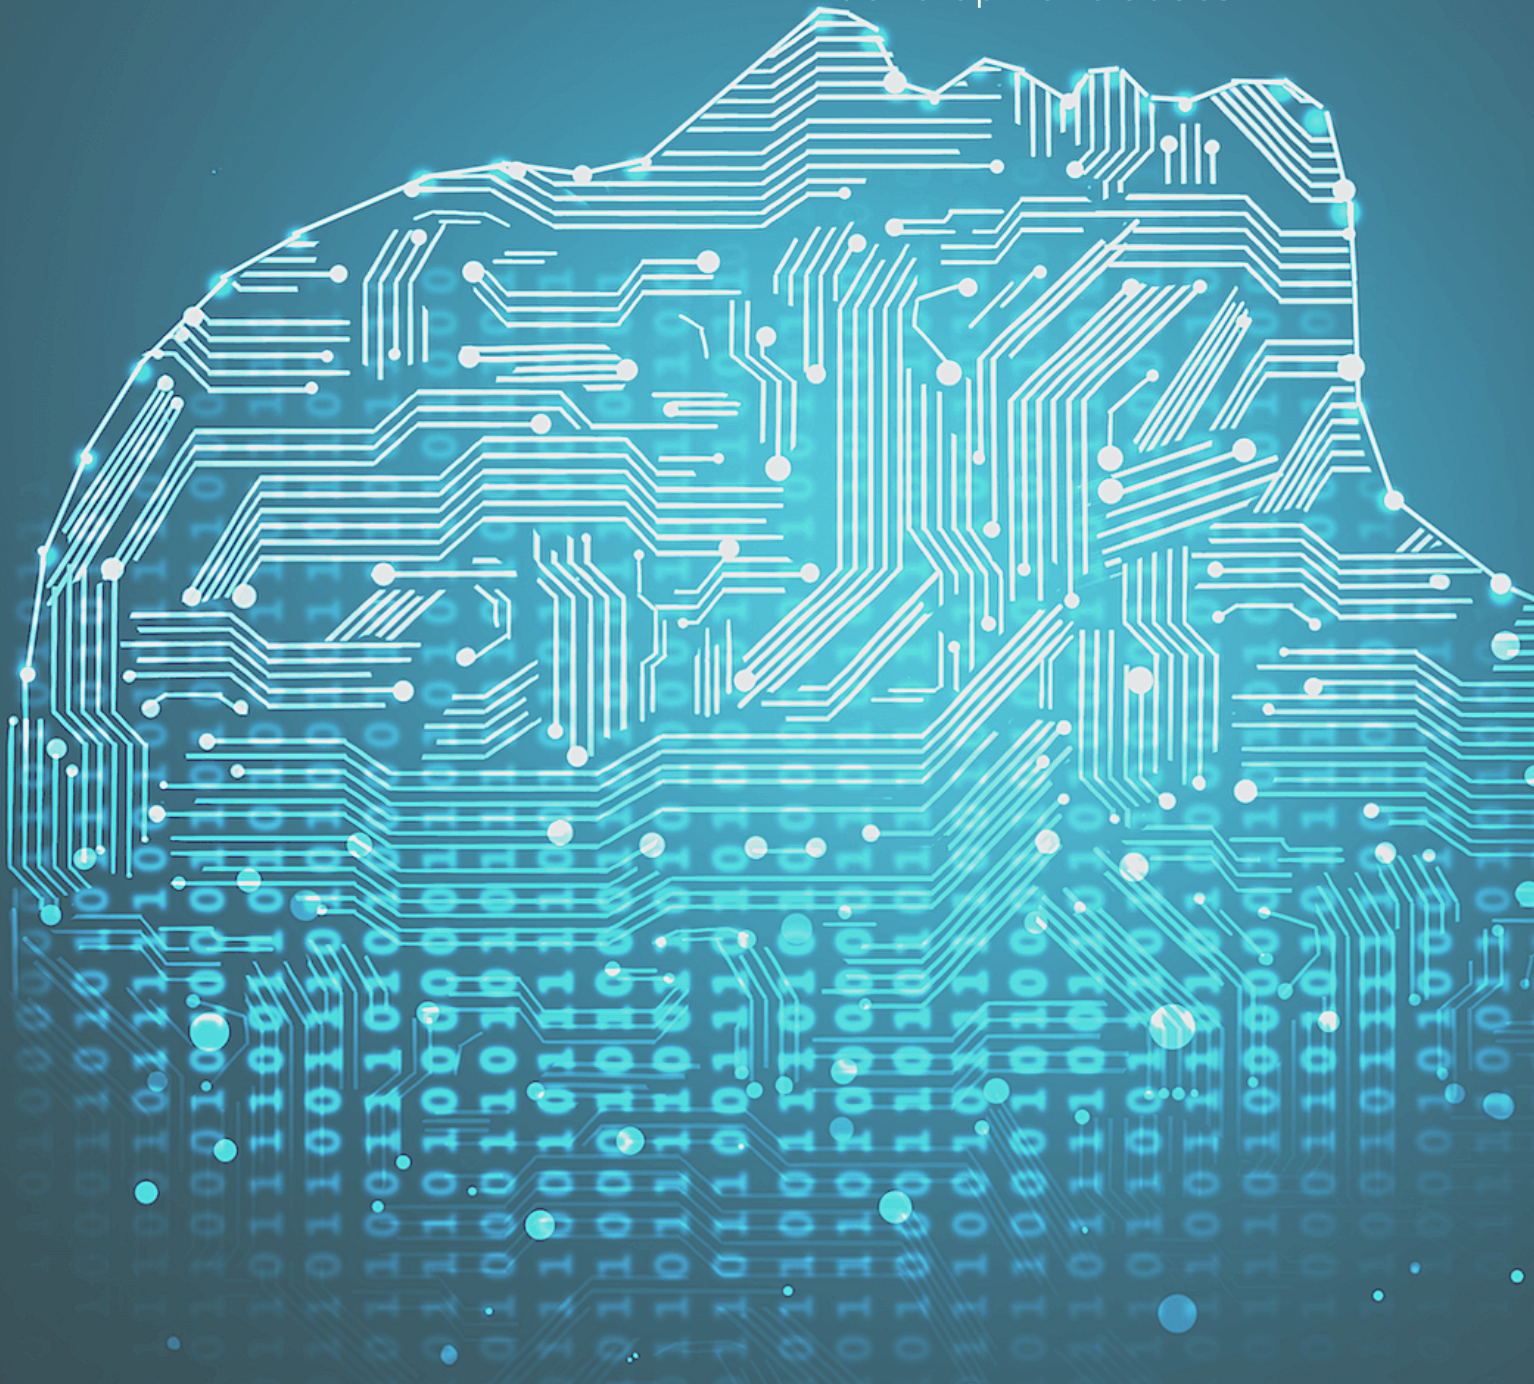

When all the bets are placed and the event is occurred, the jackpot is split up in this way:

- 70% to the winner
- 20% is taken from the developers
- 10% is the starting jackpot of the next game

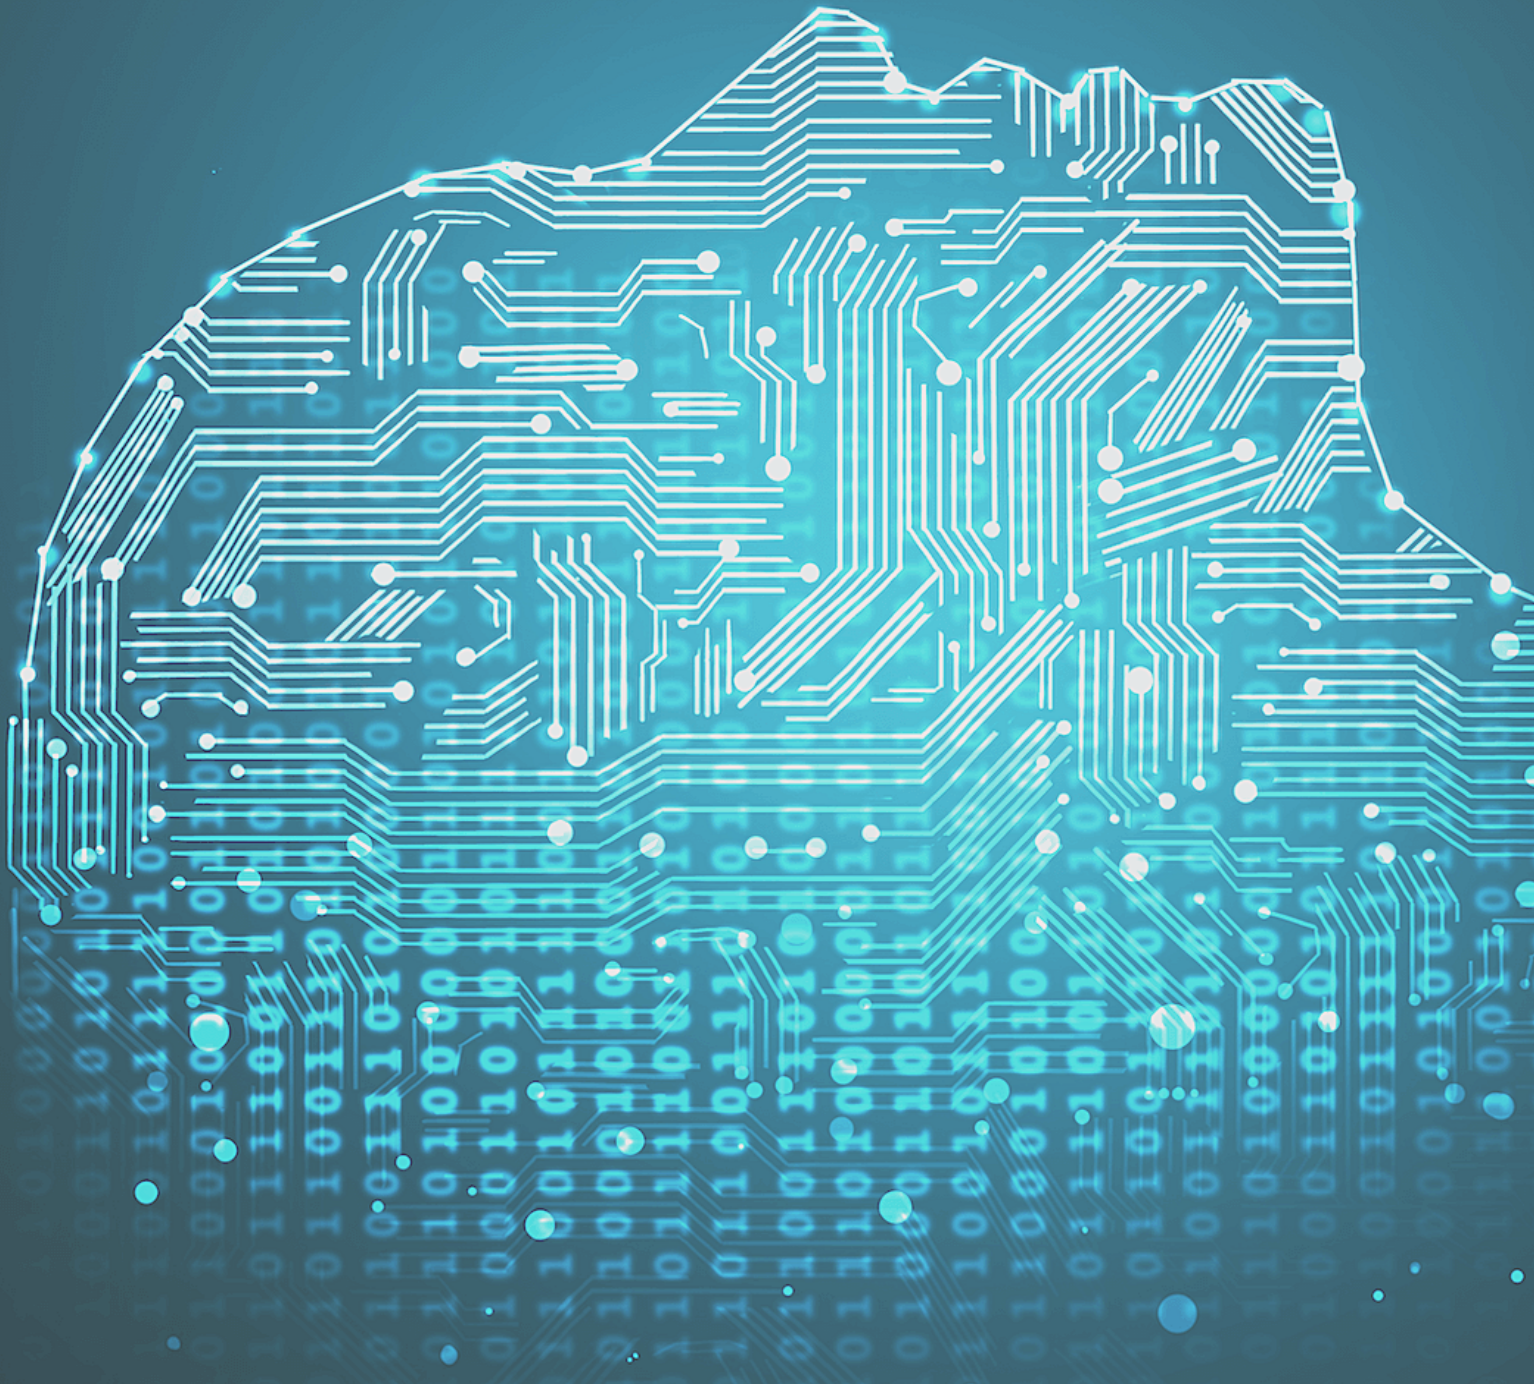

Notice: if more people bet on the same country there are more winners, so the jackpot is shared among them. In a couple of weeks the 20% of the jackpot will moved to a dividend pool activating a dividends policy. At the moment it is taken from the team to pay the development costs.

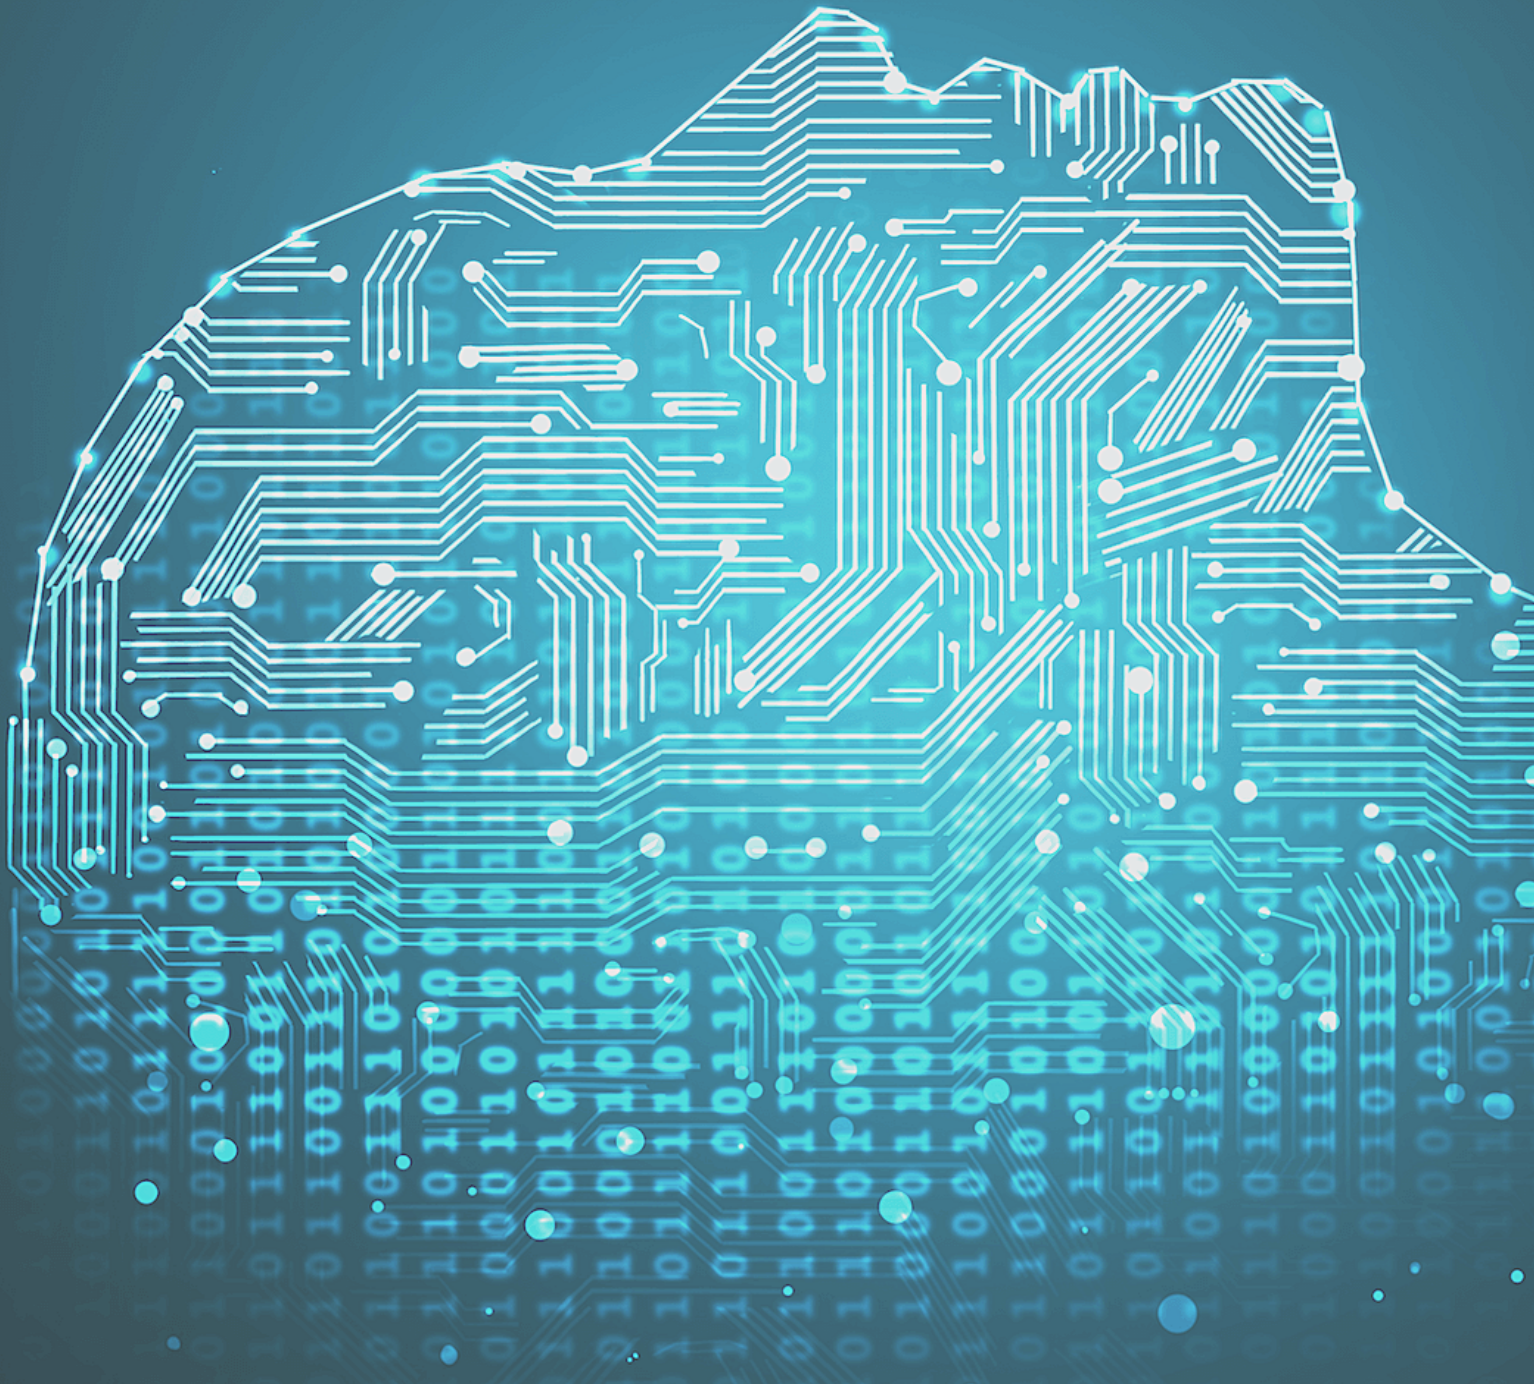

4. WALLET

From desktop PC users will need to use any browser that supports wallet extensions. Supported wallet: TronLink. Notice: UI is currently optimized only for PC. Notice: the above extension comes from third parts developers. TronWarBot declines the responsibility for any issue with third parts software.

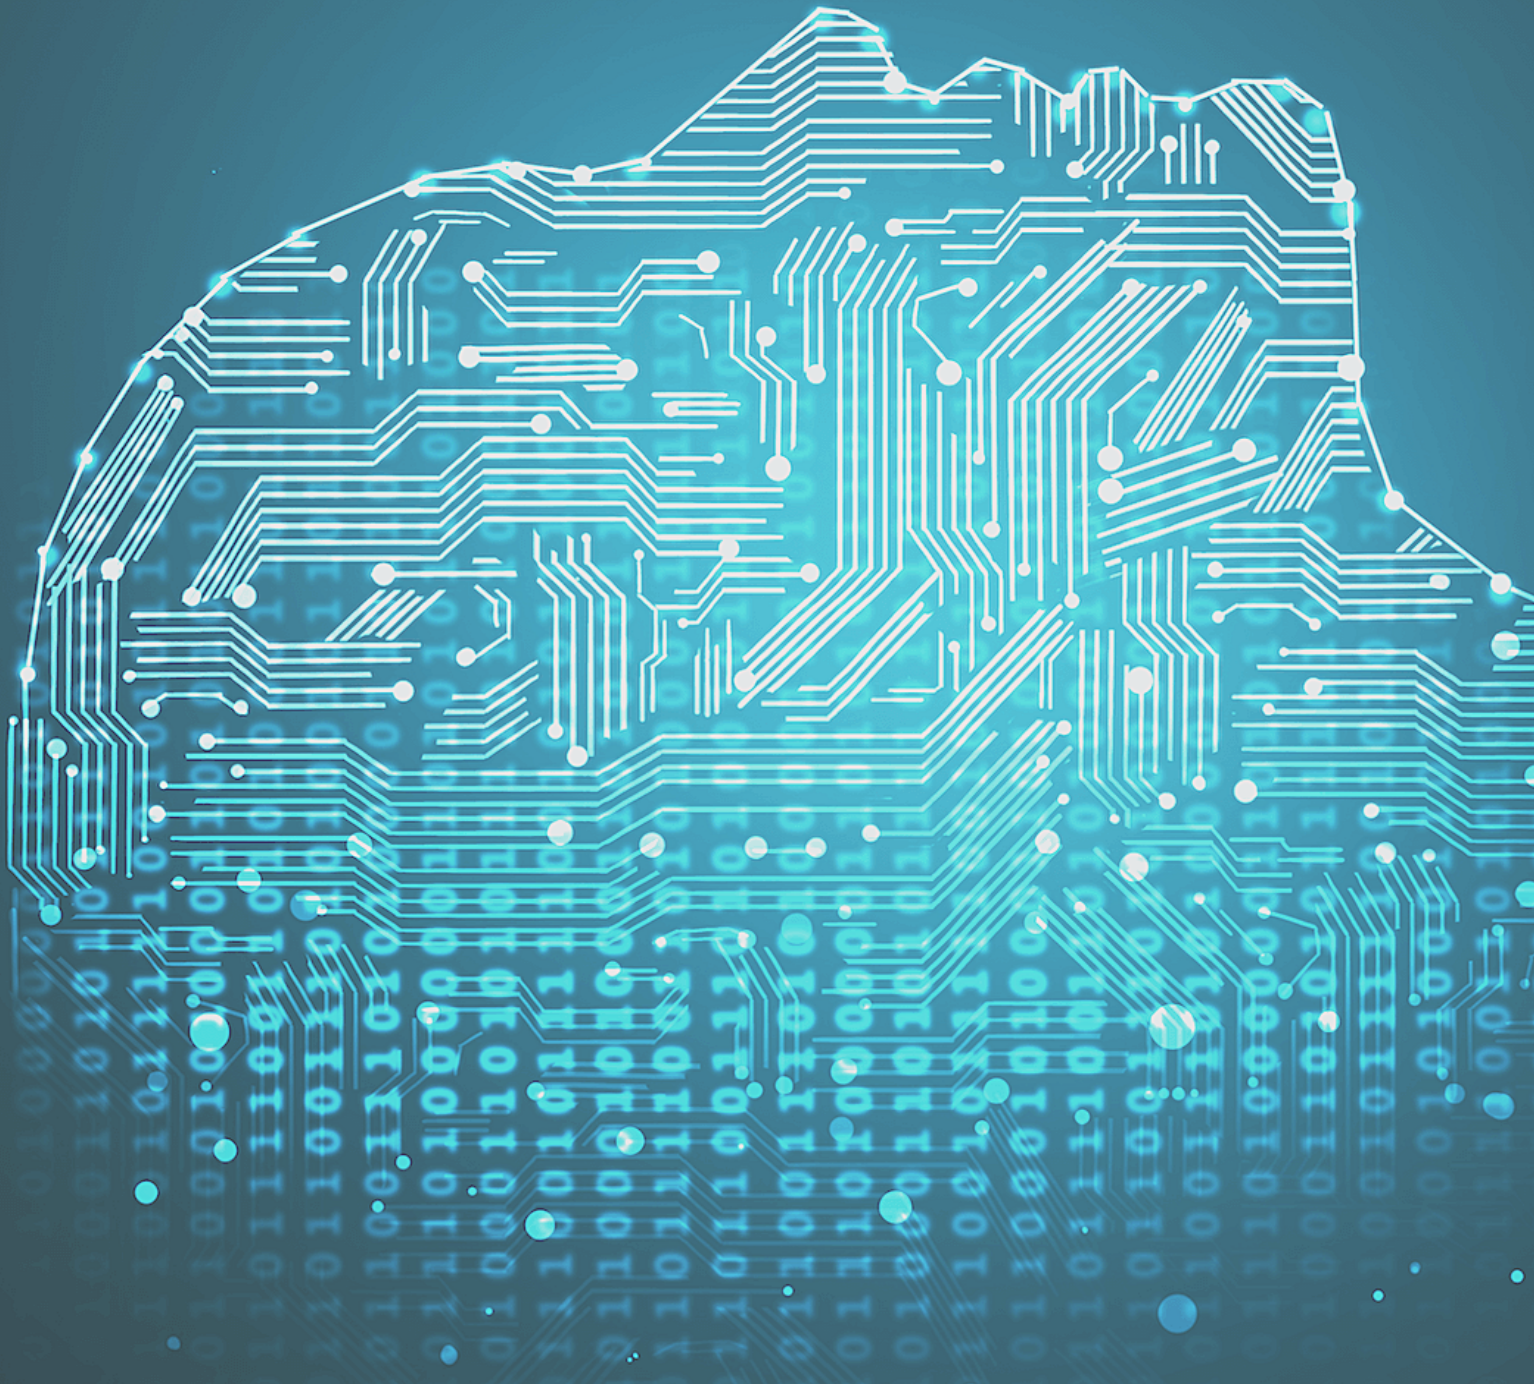

5. FAIRNESS

TronWarBot is not the owner of the WorldWarBot that runs the game, so it can't control in any way the events.

6. COMMUNITY

Since we believe in the CDD, we care of our community and any suggestion or comment is well-accepted. Join the community on the official channels!

7. ROADMAP

Q2 2019

- game launch

Q3 2019

- community development
- CDD
