

TRON WAR BOT

WHITE PAPER V1.0

1.INTRODUCTION

TronWarBot is a decentralized DApp platform. It is based on the development of TRON's main net.

The 3 pillars are Transparency, Fairness, and CDD (Community Driven Development)

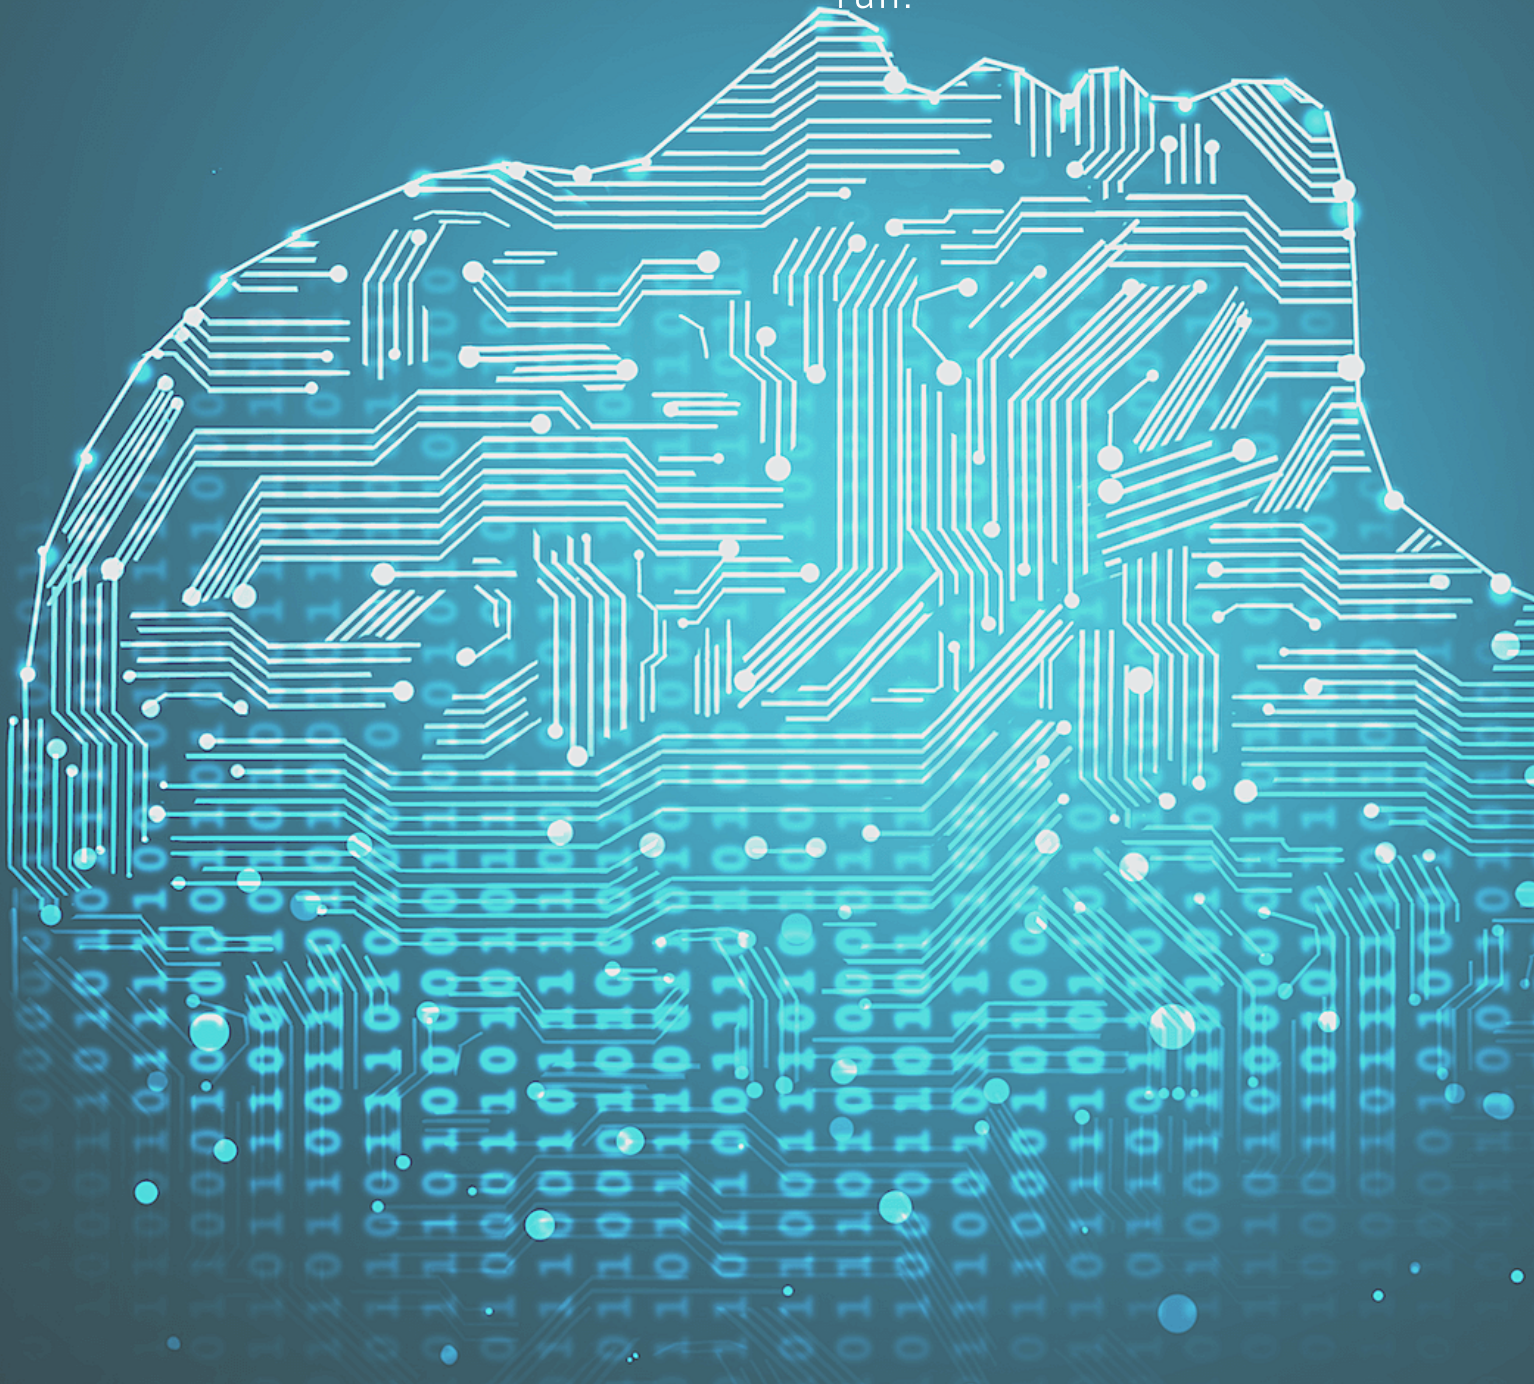

2. TRON BLOCKCHAIN

TRON ensures scalability, since it is capable of handling almost 2000 TPS, and free daily bandwidth to conduct transactions.

3. THE GAME

The game leans on a World War simulation where every hour one nation conquers another one. On www.tronwarbot.com bets are allowed to forecast the conqueror state of next turn or the winner of the whole run.

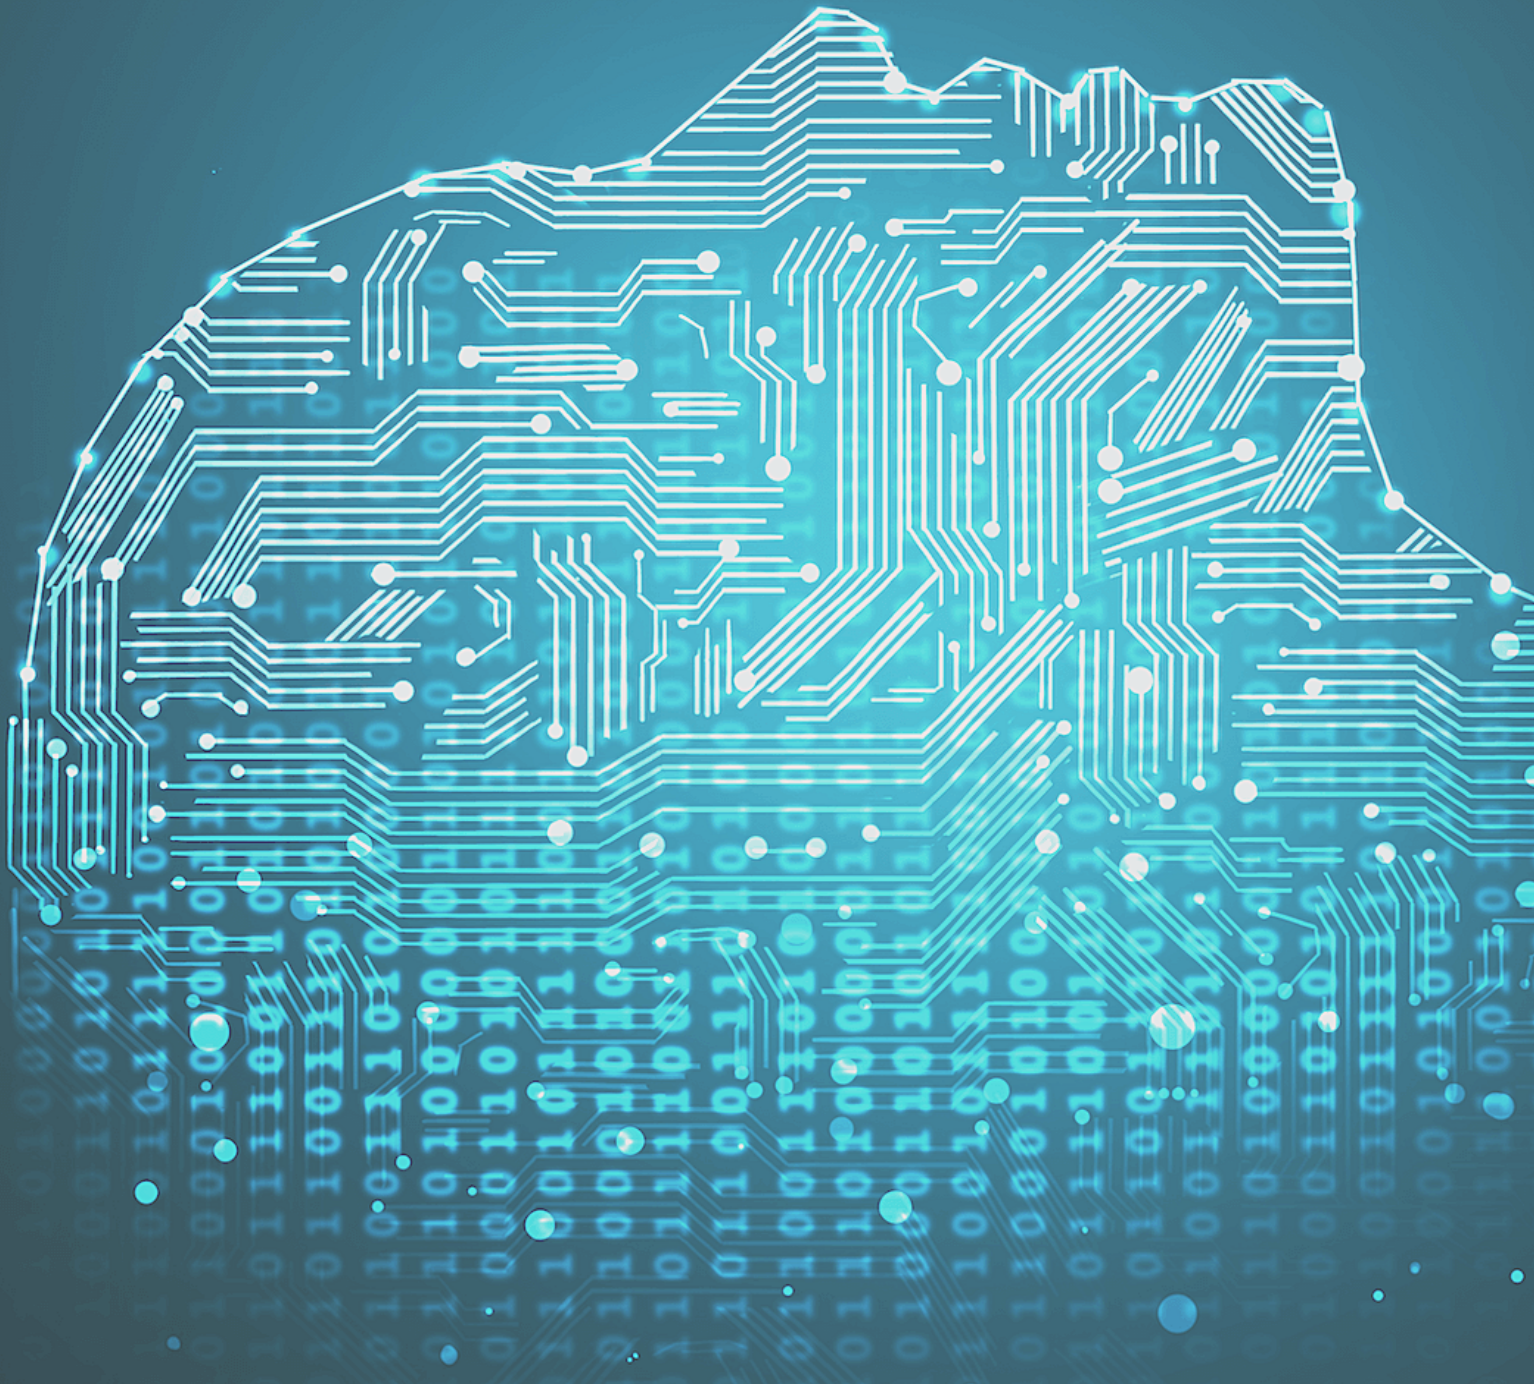

Current Jackpot

Users play against the dealer. The probability of winning is clearly declared.

Final Jackpot

The entire amount of bets is redistributed to the token holders.
80% to the winners and 20% as dividends.

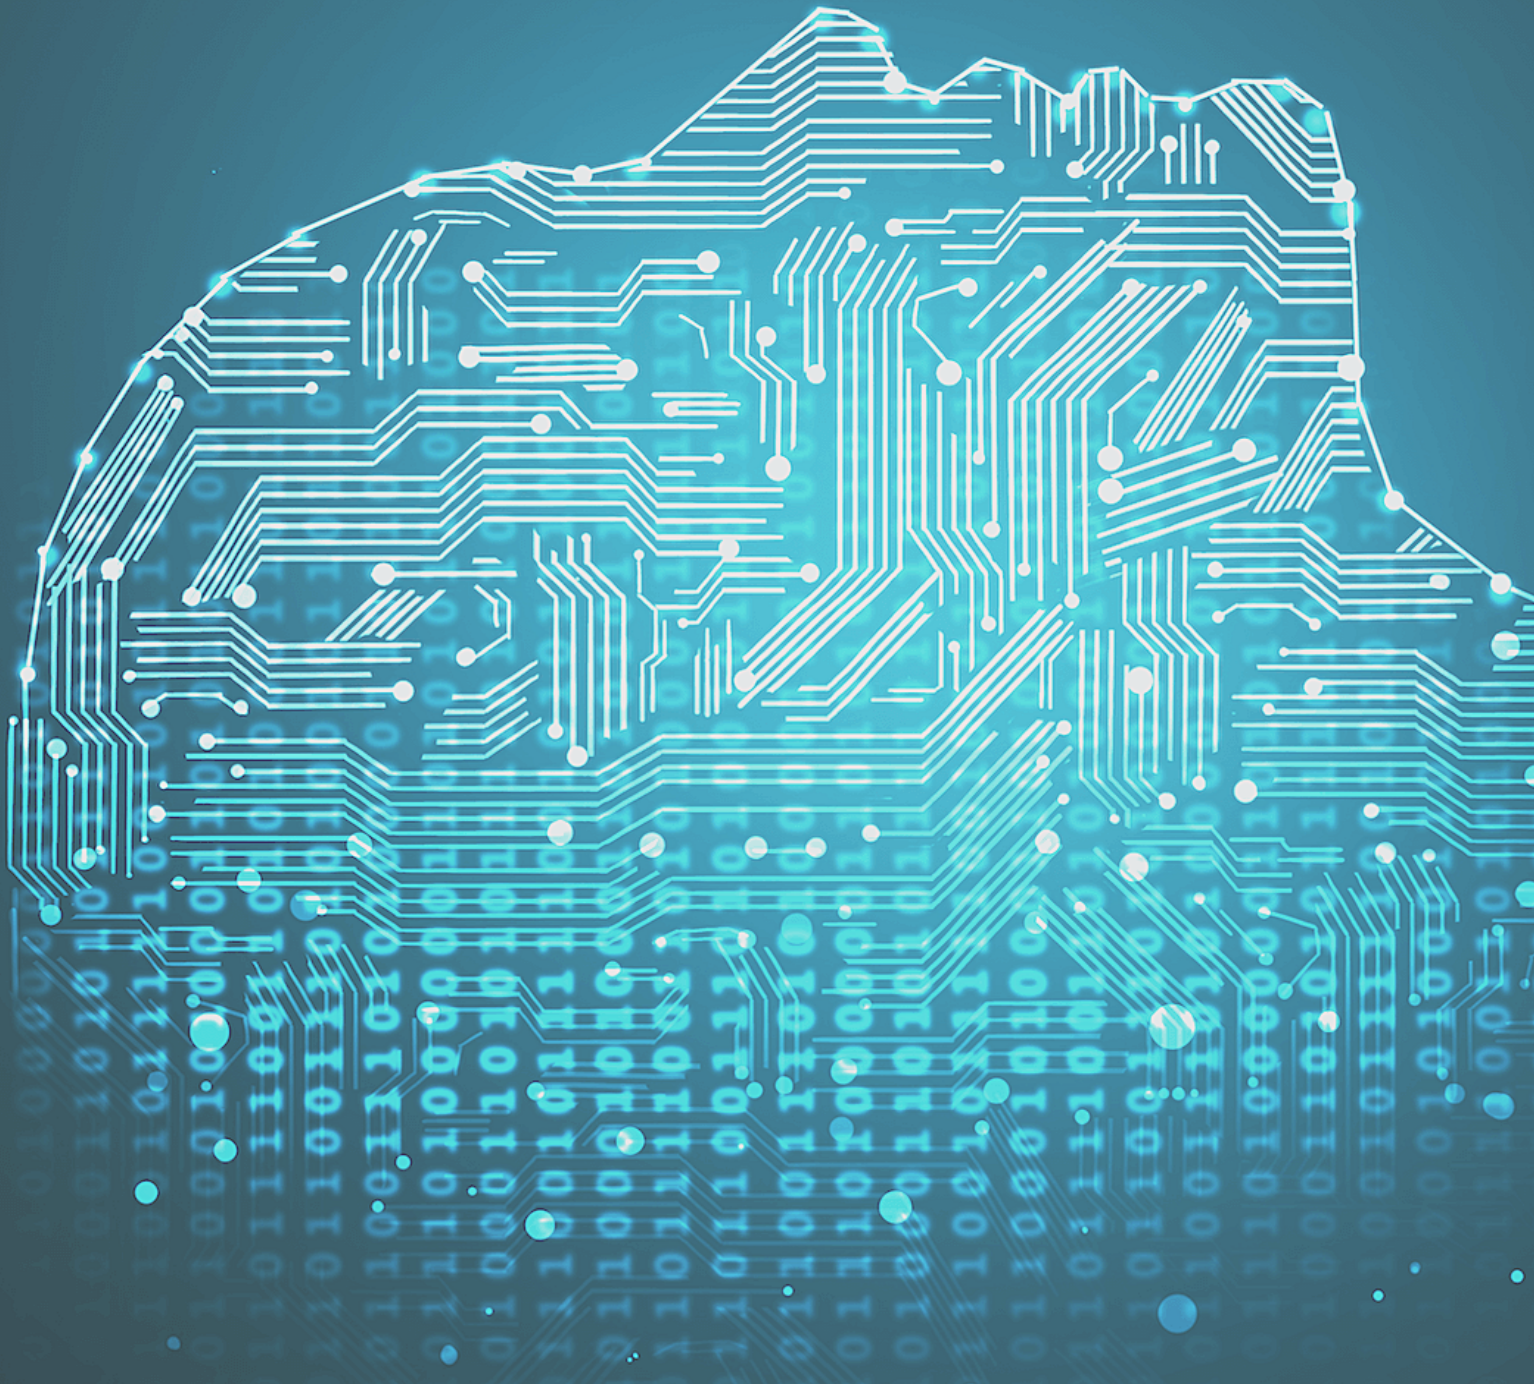

4. TOKEN AND MINING

WAR is a TRC-20 token. There is not an initial amount of tokens, WAR can only be mined. For every WAR mined by users, a WAR is received by TronWarBot team.

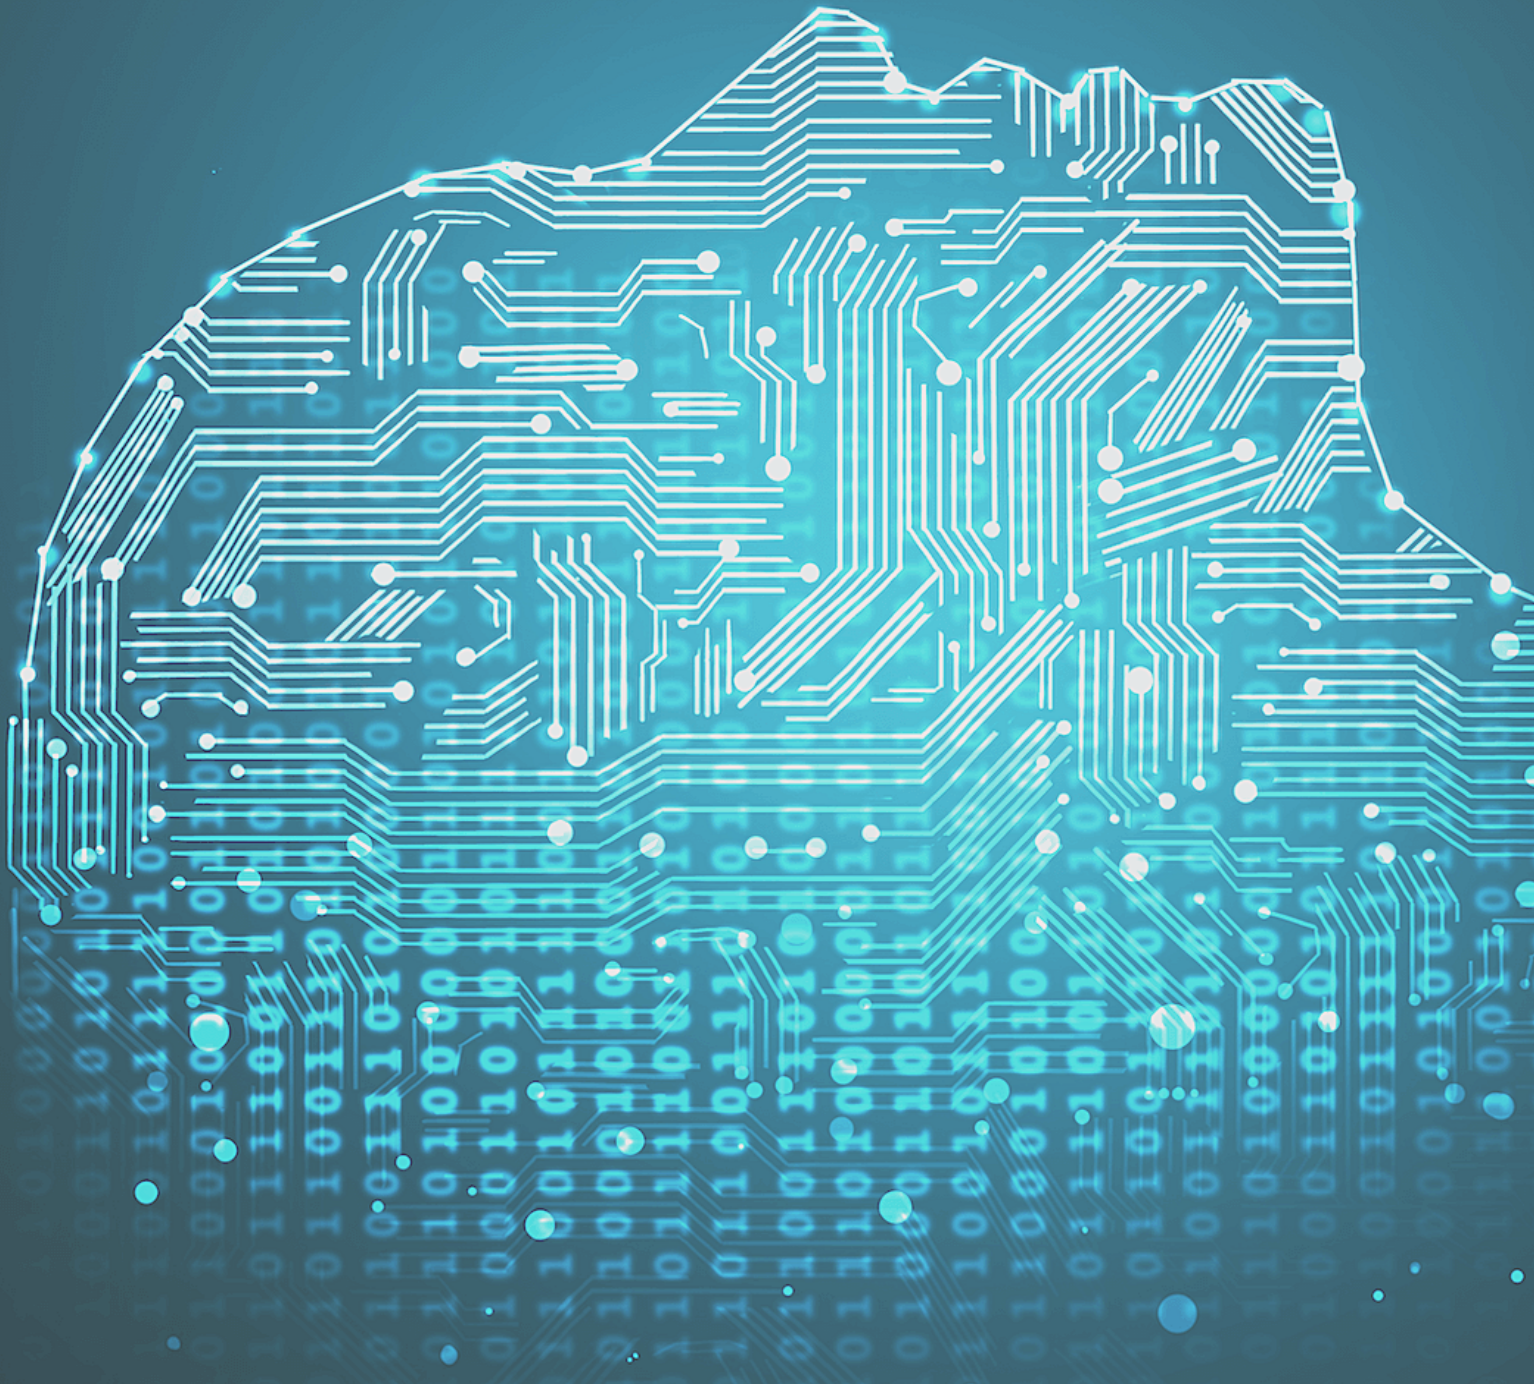

There are 100 mining stages of 10k tokens each.

At first, a WAR is mined playing 50 TRX. Then you need 50 TRX extra for each stage.

5. WALLET

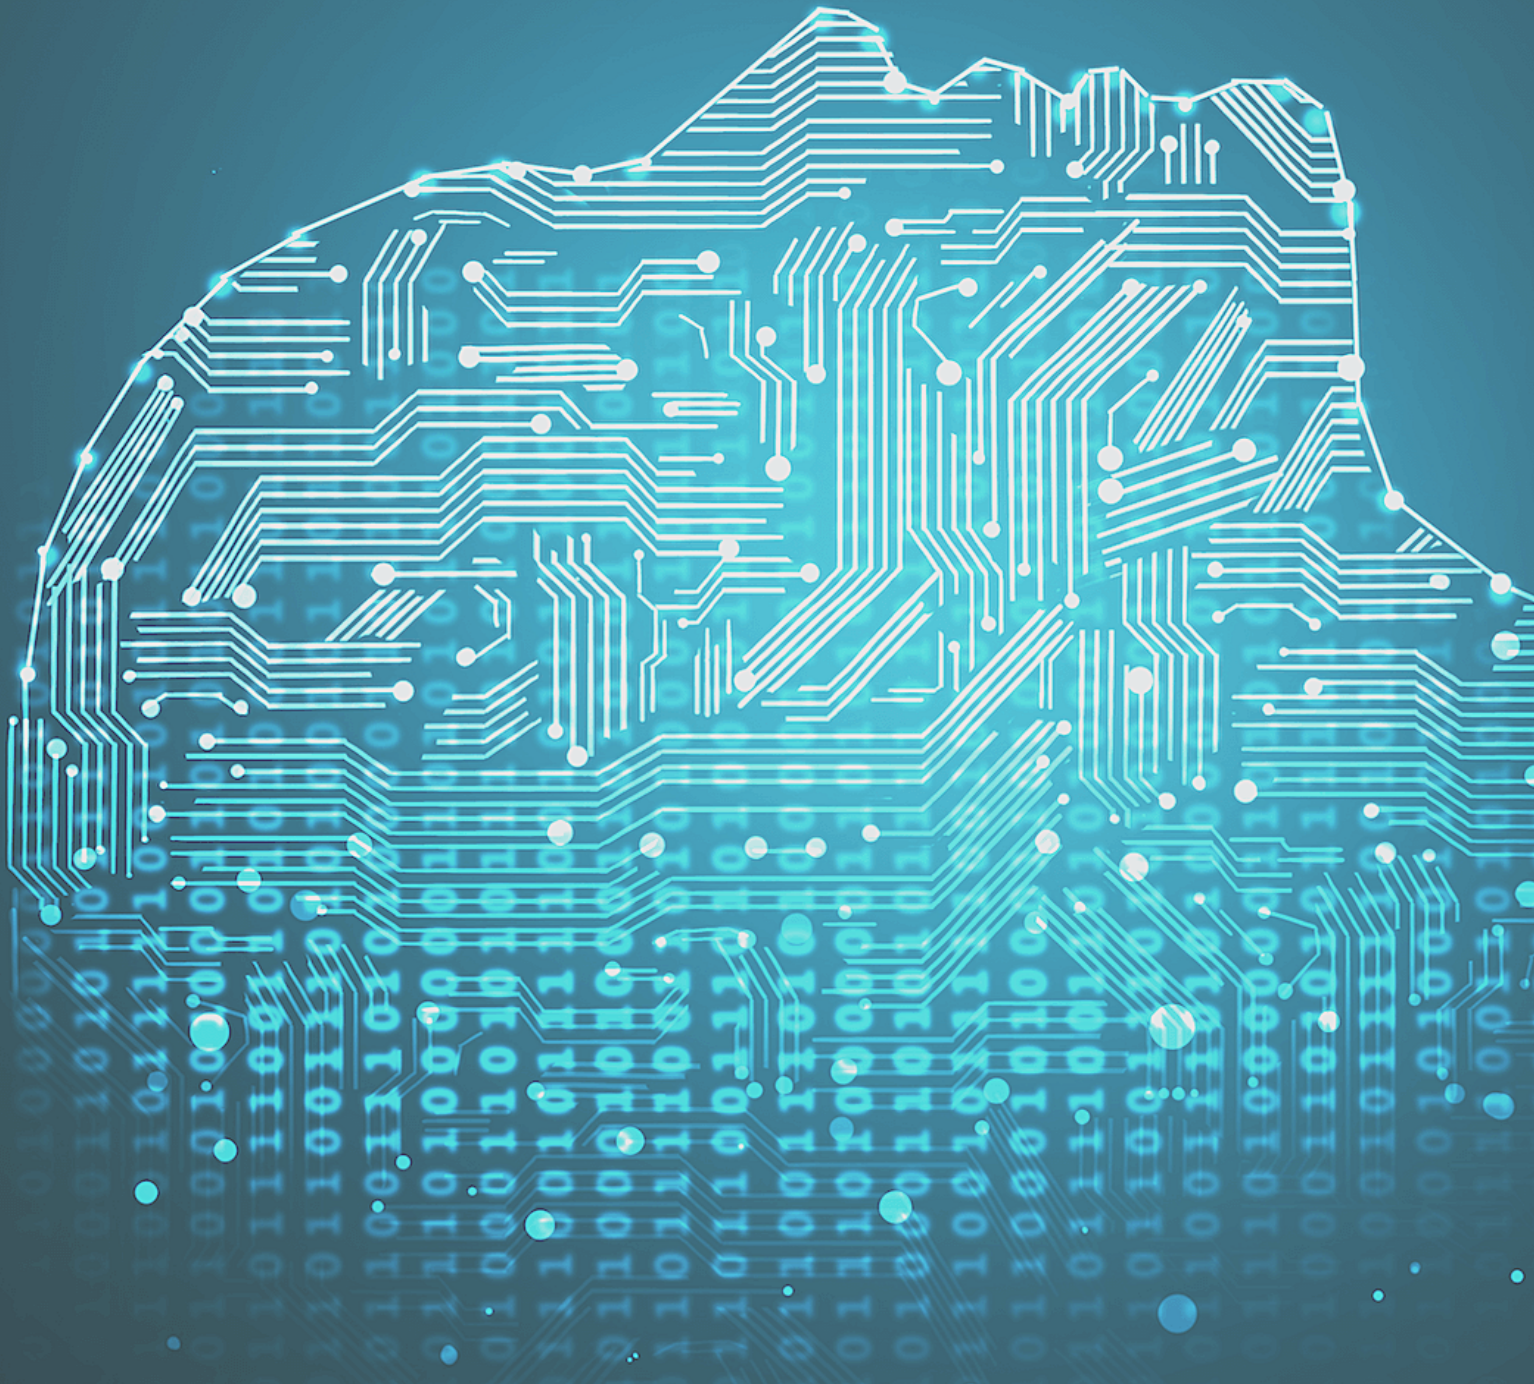

From desktop PC users will need to use any browser that supports wallet extensions.
Supported wallet: TronLink.
Notice: UI is also optimized only for Mobile. You can play it from TronLink wallet.
Notice: the above extension comes from third party developers.
TronWarBot declines the responsibility for any issue with third party software.

6. REFERRALS

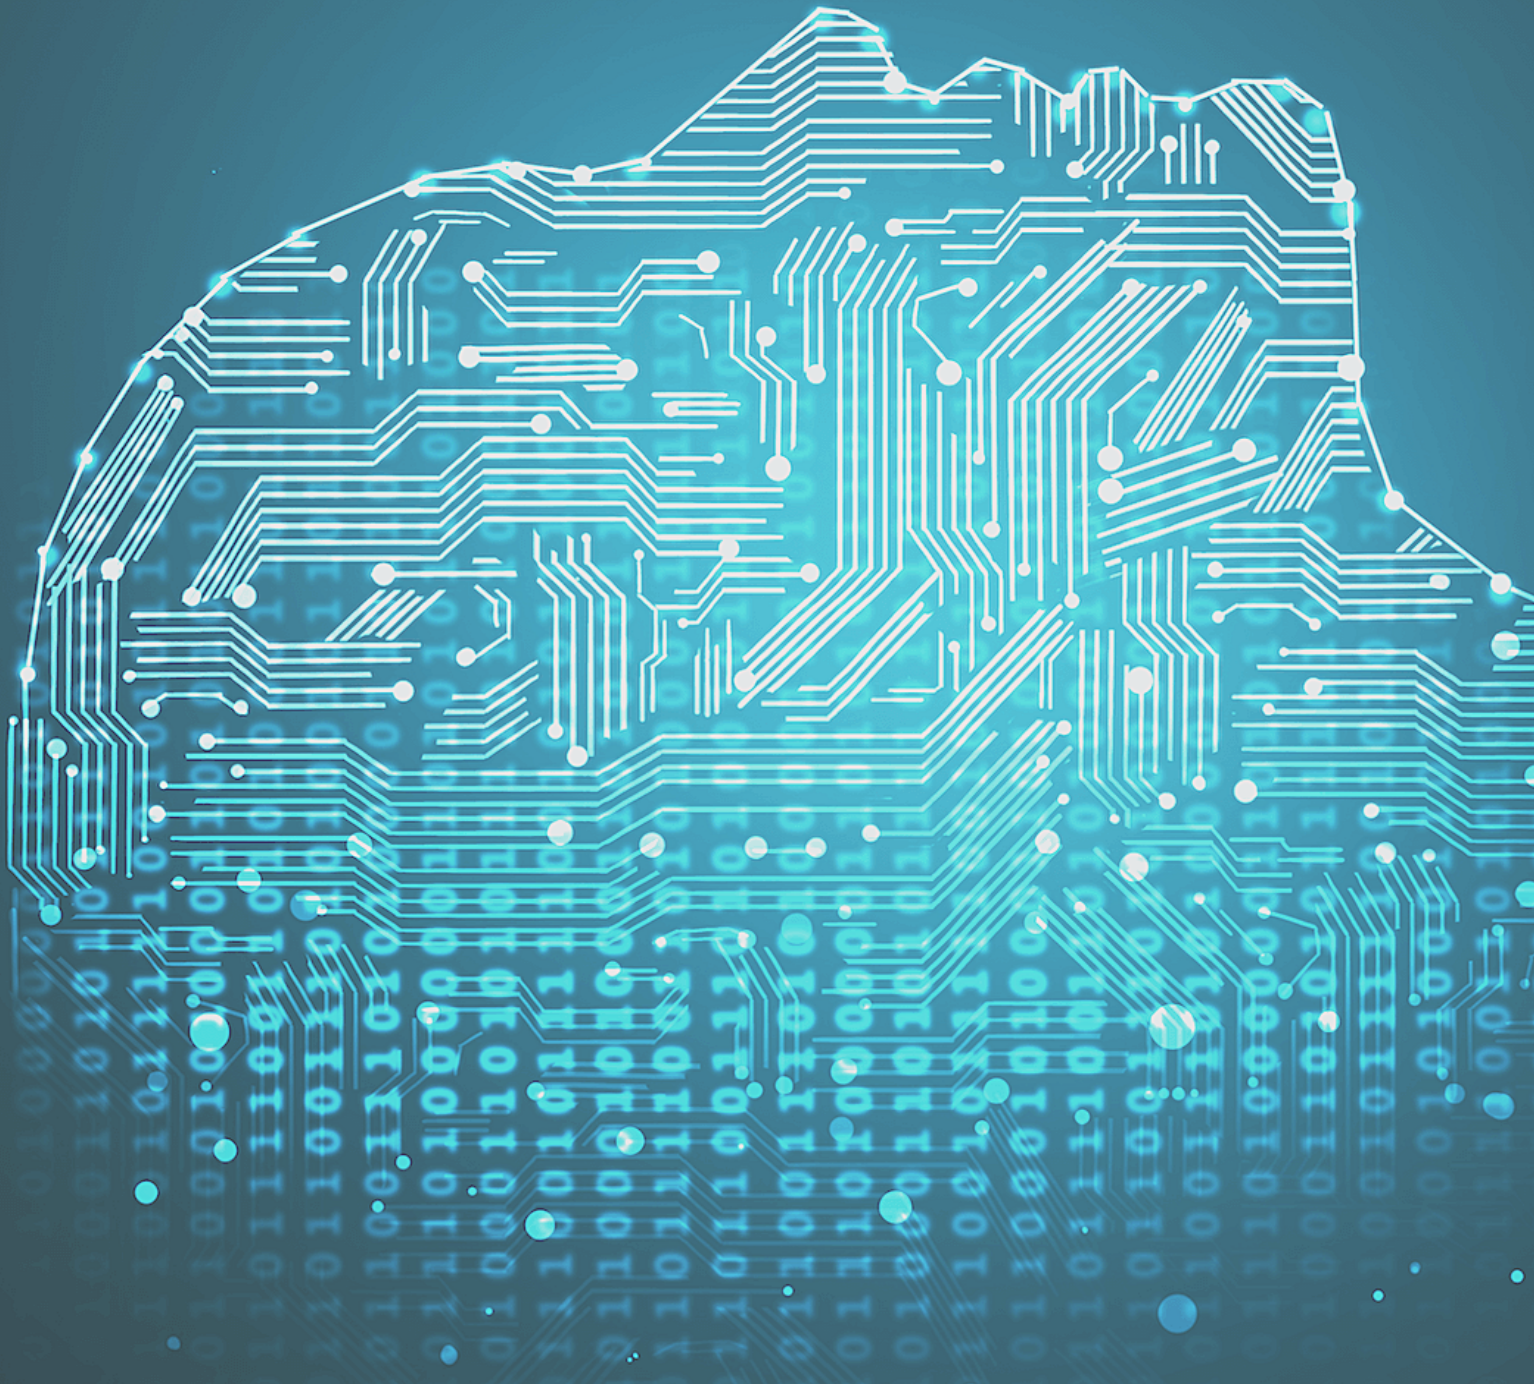

Everyone have a referral link
It allows to receive 1% of
the bet of everyone who
click on the link.

Once an address starts
using a referral link, that
can't change and it will
always provide you that 1%.

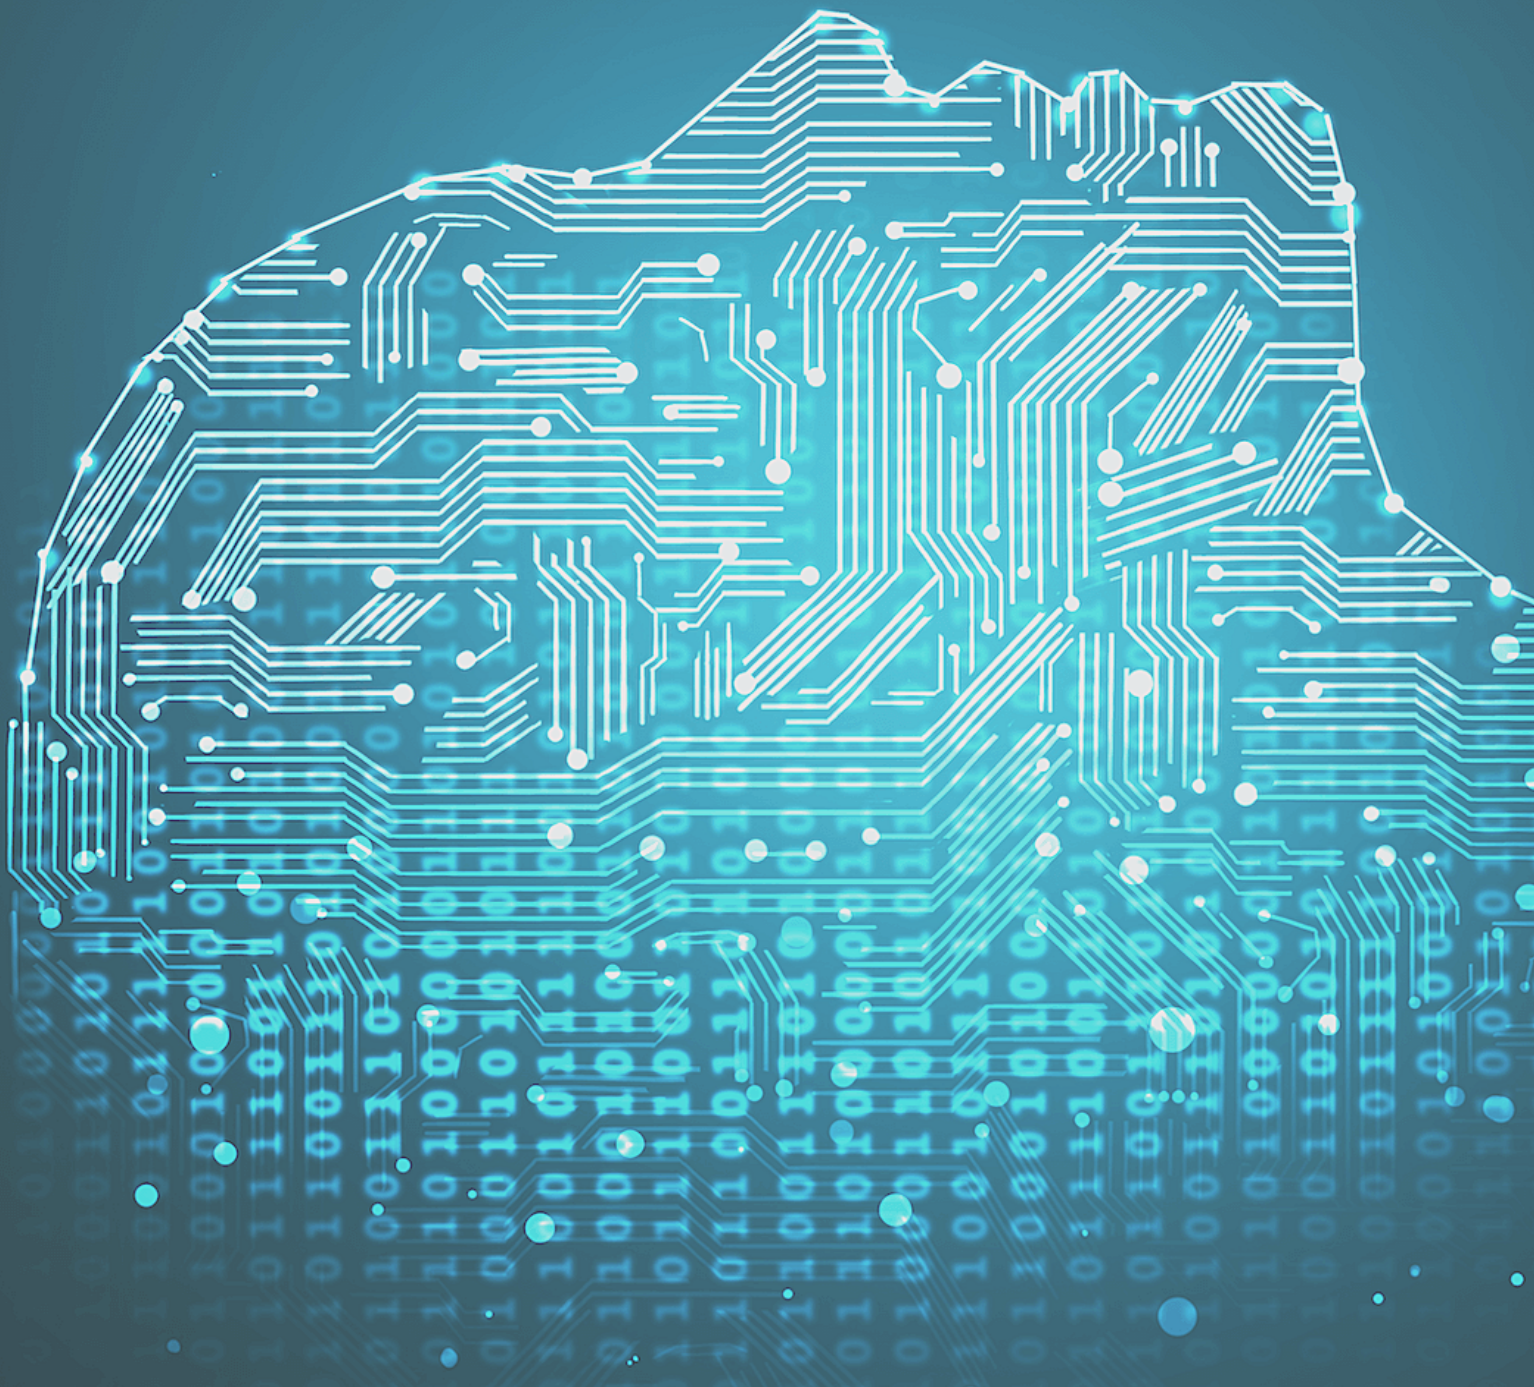

7. FAIRNESS

TronWarBot is totally transparent. Every bet is written on smart contract and nobody can change the rules.

8. COMMUNITY

Since we believe in the CDD,
we care of our community
and any suggestion or
comment is well-accepted.
Join the community
on the official channels!

9. ROADMAP

- June 2019: Beta Test
